

Program Matematika Indonesia

Panduan singkat / Quick start

PUBLIC LEARNER GUIDE | VERSION 0.63.26

Satu pintu masuk publik untuk kurikulum matematika modular. One public entrance for a modular mathematics curriculum, with readable course routes, downloads, and original-source links.

Bahasa Indonesia

Mulai dari antarmuka utama

40	25	83	40/40
published course roles	HTML learner gateways	prerequisite links	common semantic adapters

Cara memulai / How to start

1

Pilih bahasa / Choose a language

Use one of the two public entrances above. You can switch language at any time.

2

Pilih mata kuliah / Choose a course

Use the course cards or the learning map to follow prerequisites and choose a sensible next step.

3

Baca atau unduh / Read or download

Open the hosted reader when available, or use the PDF, EPUB, HTML, and ZIP options shown on the course card.

4

Tetap terhubung / Stay connected

Course readers expose routes back to the program. The hub also keeps a prominent link to each authoritative original.

Yang tersedia / What the hub provides

Hosted copy plus authoritative original. When licensing and source structure allow it, the program presents a maintained hosted reader and a separate, prominent route to the upstream source. The mirror improves continuity; it does not erase provenance.

Multiple reading modes. Course cards expose available HTML readers, PDFs, EPUBs, source archives, and offline packages. Formats vary honestly by course; the interface does not pretend every source has the same deliverables.

Portable navigation. The release archive contains the bilingual maps, learner pages, checksums, rights and provenance records, and machine-readable course data needed for offline inspection and future language editions.

Scope yang jujur / Honest scope

All 40 course roles are published in the central learner interface, and all 40 have a validated common semantic adapter. Native capability parity is currently verified for **12 of 40** roles. The common exchange layer is complete; native backend convergence is still continuing.
